

1. Following in random order are the top 10 as ranked by 22 service provider attendees. I have added the company name to the description that was posted in the survey.

	Not Interested	2	3	Somewhat Interested	5	6	Very Interested
MetaSwitch- Next-generation messaging platforms, based on open standards and server farm architectures, are simplifying the repurposing of applications for entirely new domains. With the ubiquity of STBs, it's only natural that carriers should want to take their messaging offerings to the TV screen for a stickier more immersive user experience.	jn	jn	jn	jn	jn	jn	jn
Movius- Our Emergency Notification Solution provides carriers with highly reliable, real time mass alerts. It monitors time-critical internet content (e.g. National Weather Service) as well as provides a push-notification engine for enterprises & consumers. Alerts can be sent to mobile phones, fixed line phones and/or PCs via voice, SMS or email.	jn	jn	jn	jn	jn	jn	jn
Intervoice- Sidebar is a desktop client that offers subscribers visual access to voicemail, videomail, and email, along with multiple plug-ins for news, weather, stocks, IM, etc. Sidebar allows operators to extend their brand to the desktop by providing customers with one-click access to personalized, real-time, and up to the minute information.	jn	jn	jn	jn	jn	jn	jn
Converse- Visual VM, behind the Hype, a strong solution for today: With elevated consumer demand for Visual Voicemail after the introduction of this service on the iphone, what is the next step to roll out this service to all subscribers, regardless of handset device, networks, access mode or segment? In order to reduce costs, complexity and delays in the network, one single innovative, comprehensive, versatile and intuitive end-to-end solution comprised of network and handset-based features is crucial.	jn	jn	jn	jn	jn	jn	jn
UTStarcom-This vendor is a leader in the IPTV growth markets, and recent IPTV successes are fueling innovations in their Converged IP Messaging vision. This presentation will provide an overview of IP Messaging integration with IPTV, offering a few thought-provoking ideas for revenue generation.	jn	jn	jn	jn	jn	jn	jn
Acision- Our V2T (Voice-to-text) capability transcodes Voicemail audio to text and delivers it as an SMS or Email. This enables the subscriber to read and answer any message from any web enabled or mobile device at any time, anywhere. This increases subscriber satisfaction and decreases port utilization on the voicemail platform.	jn	jn	jn	jn	jn	jn	jn
Openwave- Rich Mail 3.0 is a personalized dashboard that delivers users a converged messaging experience by offering a central access point for all communications that include email and email content preview, "drag and drop" functionality, the ability to send SMS messages from the desktop, and use of contextual right-click menus.	jn	jn	jn	jn	jn	jn	jn
Spinvox- Speak-a-Text allows you to speak an SMS from your phone (mobile or landline) or speak a message to a blog or social network site without typing - The service converts the message to text and delivers it to your destination. Speak-a-Text is an optimal product for hands-free environments.	jn	jn	jn	jn	jn	jn	jn
Alcatel-Lucent- The Geographic Messaging Service Platform enables the next-generation of innovative location-based push services, delivering richer user experiences. Utilizing powerful patent-pending technology including adaptive algorithms and intelligent processing, GMSP consolidates dynamic geo-fencing functionality across networks through a single engine efficiently sharing network resources via the same client and server.	jn	jn	jn	jn	jn	jn	jn
Ureach- We are introducing Voicemail 2.0, which keeps voicemail up to date in a world with so many communications choices. Voicemail 2.0 consists of innovations such as 3D-personalization, push voicemail, and voicemail services that are driven directly from contacts in subscribers' mobile handsets. Handset-driven greetings will be demonstrated.	jn	jn	jn	jn	jn	jn	jn
